

Some historical facts

The use of medical ozone is not new and ozone is a naturally occurring molecule and healthful gas. In 1740, Schonbein discovered ozone and in 1891 the molecular composition was modeled. Observation soon revealed that ozone reacted with and destroyed bacteria, virus, and other organisms, that it has antibacterial, antiviral and antifungal properties without irritating effects. During the 1st World War the application of ozone to war wounds served primarily as a disinfectant.

In 1896, the electrical genius Nikola Tesla patented his first ozone generator and in 1900 he formed the Tesla Ozone Co. Tesla sold ozone machines and ozonated olive oil to give to doctors for medical use

"Ozonated olive oil is an effective adjunct treatment for inflammations of the skin, such as dermatitis and seborrhea. Ozonated olive oil is helpful in bacterial infections of the skin including carbuncles, cellulitis, ecthyma, erysipelas, erythasma, folliculitis, furuncles, granuloma annulare, impetigo, paronychia, psoriasis, ringworm, skin yeast, staphylococcus, sweat gland infections and the tinia versicolor. It is also helpful for bed sores (decubitus ulcers) and for the post-surgical treatment of wounds to prevent secondary infections." – (Dr H.E. Sartori)

Actual experiences

In an email to Dr. S Pressman, Canada Dave Courtesy expressed: "... the ozonated olive oil appears to be working wonders with the basal cell carcinoma. I have somewhat extensive sun damage on the temples, forehead, and nose and around the ears. It's tough to put a number on these things, but after 10 days, 3 applications per day, I estimate there has been a 70-to-80 percent improvement in the facial skin. Also have a nickel sized, deeper red patch (that tends to bleed) on my back, which is 50 percent improved. In addition, I have been applying some on my chest (upper rib cage, just below left breast) where I have had a stubborn case of Grover's Disease for seven years now. The rash has improved 50 percent. I am becoming quite a believer in the power of ozone!"

Experiences with Global Health's AMAZING NATURAL OZONE CURATIVE GEL

As for experiences from New Zealand, this Ozone Gel is effective in treating a range of ailments such as acne to dental decay. "People are constantly reporting new uses. A few include using it as a sun-block and to restore skin to smooth out wrinkles; stop hair loss or balding and begin re-growing hair; applying to bruises, wounds or blisters and eliminate unsightly black and blue from forming; by putting quickly on burns and then replying – they will never blister, including sun burn; applying to mouth ulcers or toothaches; put on itches of any kind – it will even stop sand-fly bites from itching; blisters; sore feet the list goes on and on. One person applied it under a plaster directly over a skin cancer spot for several weeks where upon the patch 'fell off'. The small 'hole' scared him but soon it healed up leaving not even a scar." – 'Ozone Ron', Aquazone NZ.

Always consult your doctor before use.

How is Ozone Gel made?

Aquazone's custom made Ozone Gel is made by using an Aquazone Ozone Generator to bubble medical grade ozone (medical oxygen as a source) very slowly through high quality olive oil for around 3 weeks until it is ready for bottling. The olive oil becomes a paste or salve holding the ozone in suspension without the olive oil being oxidized. This gel we call OZONE GEL and it is highly effective on a wide range of skin complaints.

Olive oil has been used for centuries to restore a youthful suppleness to the skin. The Greeks used it to clean their bodies. In lieu of soap, at the baths, olive oil was applied to the body then scraped off with special tools. Olive oil on the body may help prevent dry skin conditions and eczema and is a mild antibacterial agent just as natural skin oils are. It is also the only medium that will preserve ozone for an extended period of time.

All natural

No preservatives, colourants, stabilizers or fragrances are added. This is why the Ozone Gel needs to be stored below 15 degrees Celsius or more ideally, refrigerated.

"Ozonated olive oil, kept refrigerated, retained its effectiveness for over ten years in tests conducted by German researchers. It is particularly indicated for the treatment of all skin infections and dermatomycoses and is excellent when used after gaseous Ozone treatment by limb bagging. It retains its effectiveness for many hours after application"
– (Dr J. Hansler)

How does Ozone Gel work?

In the inactivation of bacteria, viruses, fungi, yeast and protozoa, ozone disrupts the integrity of the bacterial cell envelope through oxidation of the phospholipids and lipoproteins. In fungi, ozone inhibits cell growth at certain stages. With viruses, the ozone damages the viral capsid and disrupts the virus-to-cell contact with peroxidation. The weak enzyme coatings on cells which make them vulnerable to invasion by viruses make them susceptible to oxidation and subsequent elimination from the body.

Doctor's report that the ozonated oil speeds up the healing process, improves blood flow, alleviates pain, and reduces inflammation: it has anti-bacterial, anti-fungal properties, and heals cell tissues among other things. Oxygen species are absorbed through the pores of the skin which enters the circulatory system and enriches the blood.

No side effects

It will feel very soothing to affected areas. Apart from its therapeutic value, it is also energizing and refreshing.

There are no side effects and it is therefore a highly effective, natural alternative to cortisone. Used medically, Ozone increases the local oxygen supply to lesions, improves and accelerates wound healing, destroys bacteria, fungi, protozoa and viruses. These micro-organisms are generally anaerobic; they thrive in oxygen-starved environments. When they come into contact with Ozone (or enriched Oxygen) their cellular walls are destroyed. Ozone achieves this without harming healthy cells or tissue.

What is Ozone Gel used for?

Ozone Gel is a powerful, safe, 100% natural alternative to addressing a wide variety of skin ailments such as:

- asthma
- beauty aid,
- cuts,
- bee stings,
- blisters,
- sunburn,
- leg ulcers,
- fistulae,
- candida,
- cold sores,
- hair loss,
- diaper rash,
- dry skin,
- seborrhea,
- ear infections,
- acne,
- boils,
- fungal growths & infections,
- gingivitis,
- infections,
- eczema,
- herpes simplex,
- wrinkles,
- insect bites,
- bed sores,
- mycosis,
- chilblains,
- rashes,
- scrapes,
- recent scarring,
- burns,
- skin ulcers,
- hemorrhoids,
- thrush,
- vulvovaginitis,
- psoriasis.

In addition it is very useful for dealing with various problems in animals. It can be applied directly to cuts and incisions or fed to them. Ozone Gel has many therapeutic uses, when used for massage the Ozone enters the tissue and oxidizes lactic acid and toxins.

Breathing of Ozone Gel

Ozone Gel is safe to breathe. This is an excellent therapy for asthma, bronchitis and pneumonia.

Ingestion of Ozone Gel

A half teaspoon can be consumed one to four times a day. When used internally, Ozone Gel has beneficial effects; it will detoxify the liver and hasten the healing of affected conditions. Capsules may be filled with the Ozone Gel.
